- **Fuentes de datos:** Los índices Science Citation Index-Expanded (SCIE) y Social Sciences Citation Index (SSCI) de la Web of Science Colección Principal.
- **Tipos de documentos:** ESI analiza artículos y revisiones de revistas en SCIE y SSCI para determinar el rendimiento una publicación, una organización, etc.
- **Cobertura de años:** Los datos ESI consisten en un archivo dinámico de 10 años, que aumenta con cada actualización bimensual.
- **Áreas de investigación:** ESI utiliza 22 disciplinas generales para clasificar entidades e identificar documentos de alto rendimiento. Cada revista se asigna a una sola disciplina, y la investigación publicada en esa revista tendrá esta misma asignación (En el caso de revistas multidisciplinares, la reclasificación se realiza al nivel de documento, basándose en un análisis de las referencias citadas. Esto significa que los artículos publicados en revistas como *Science* y *Nature* podrían pertenecer a disciplinas más específicas que Multidisciplinary)
- **Recuentos de citas :** Sólo las citas de revistas indexadas en los índices SCIE, SSCI y AHCI se tienen en cuenta para el análisis de ESI.

Las referencias

Las tasas de citas por año y disciplina, permiten la comparación del número de citas para artículos específicos publicados el mismo año e indexados en la misma disciplina

Field Baselines

Baselines are annualized expected citation rates for papers in a research field.

Citation Rates are yearly averages of citations per paper.

Citation Rates	RESEARCH FIELDS ▲	2011	2012	2013	2014	2015	2016	2017	2018
		2011	2012	2013	2014	2015	2016	2017	2018

Highly Cited Researchers 2024

NOVEMBER 19, 2024

Citations and stature: Not so simple anymore

David Pendlebury

Head of Research Analysis at the Institute for Scientific Information

A global perspective

Raising the bar for accuracy and integrity

Ensuring accurate representation of researchers

A commitment to excellence

Discover the *Highly Cited Researchers 2024* list, recognizing the world's most influential scientists and social scientists, and the rigorous analysis behind their selection.

Since 2014, the annual list of Highly Cited Researchers™ has revealed individuals, institutions and nations demonstrating the greatest attention in the scientific and scholarly literature during the previous decade.

The list relies primarily on citation frequency, focusing on papers ranking in the top 1% for field and publication year, along with the authors of those papers. In other words, we take a top cut of papers garnering the most citations and compile a list of those researchers who published the largest number of highly cited publications by field.

A citation distribution is highly skewed, as are many measures of attention and achievement, with only a few individuals reaching extreme levels. Our list of about 6,600 researchers represents roughly a one in 1,000 selection of the global researcher population.

What it means to be a Highly Cited Researcher

The screenshot shows a dark-themed website for 'Highly Cited Researchers'. On the left, a sidebar lists several sections: 'Highly Cited Researchers' (highlighted with a green border), 'Analysis', 'Evaluation & selection', 'Researcher stories', 'Past lists', and 'FAQs'. At the top right, there is a green button labeled 'Explore Highly Cited Researchers' with a green arrow pointing right and a small upward-pointing arrow icon next to it. In the center, a large green button contains the URL <https://clarivate.com/highly-cited-researchers/>.

Highly Cited Researchers have demonstrated significant and broad influence in their field(s) of research

Each researcher selected has authored multiple Highly Cited Papers™ which rank in the top 1% by citations for their field(s) and publication year in the Web of Science™ over the past decade. However, citation activity is not the sole selection indicator. This list, based on citation activity is then refined using qualitative analysis and expert judgment as we observe for evidence of community-wide recognition from an international and wide-ranging network of citing authors.

Of the world's population of scientists and social scientists, Highly Cited Researchers are 1 in 1,000.

2024 Analysis

An in-depth analysis of the program by experts at the Institute for Scientific Information™ provides valuable insights into the global landscape of top research talent and identifies trends across countries, regions, and institutions.

How are Highly Cited Researchers selected and evaluated?

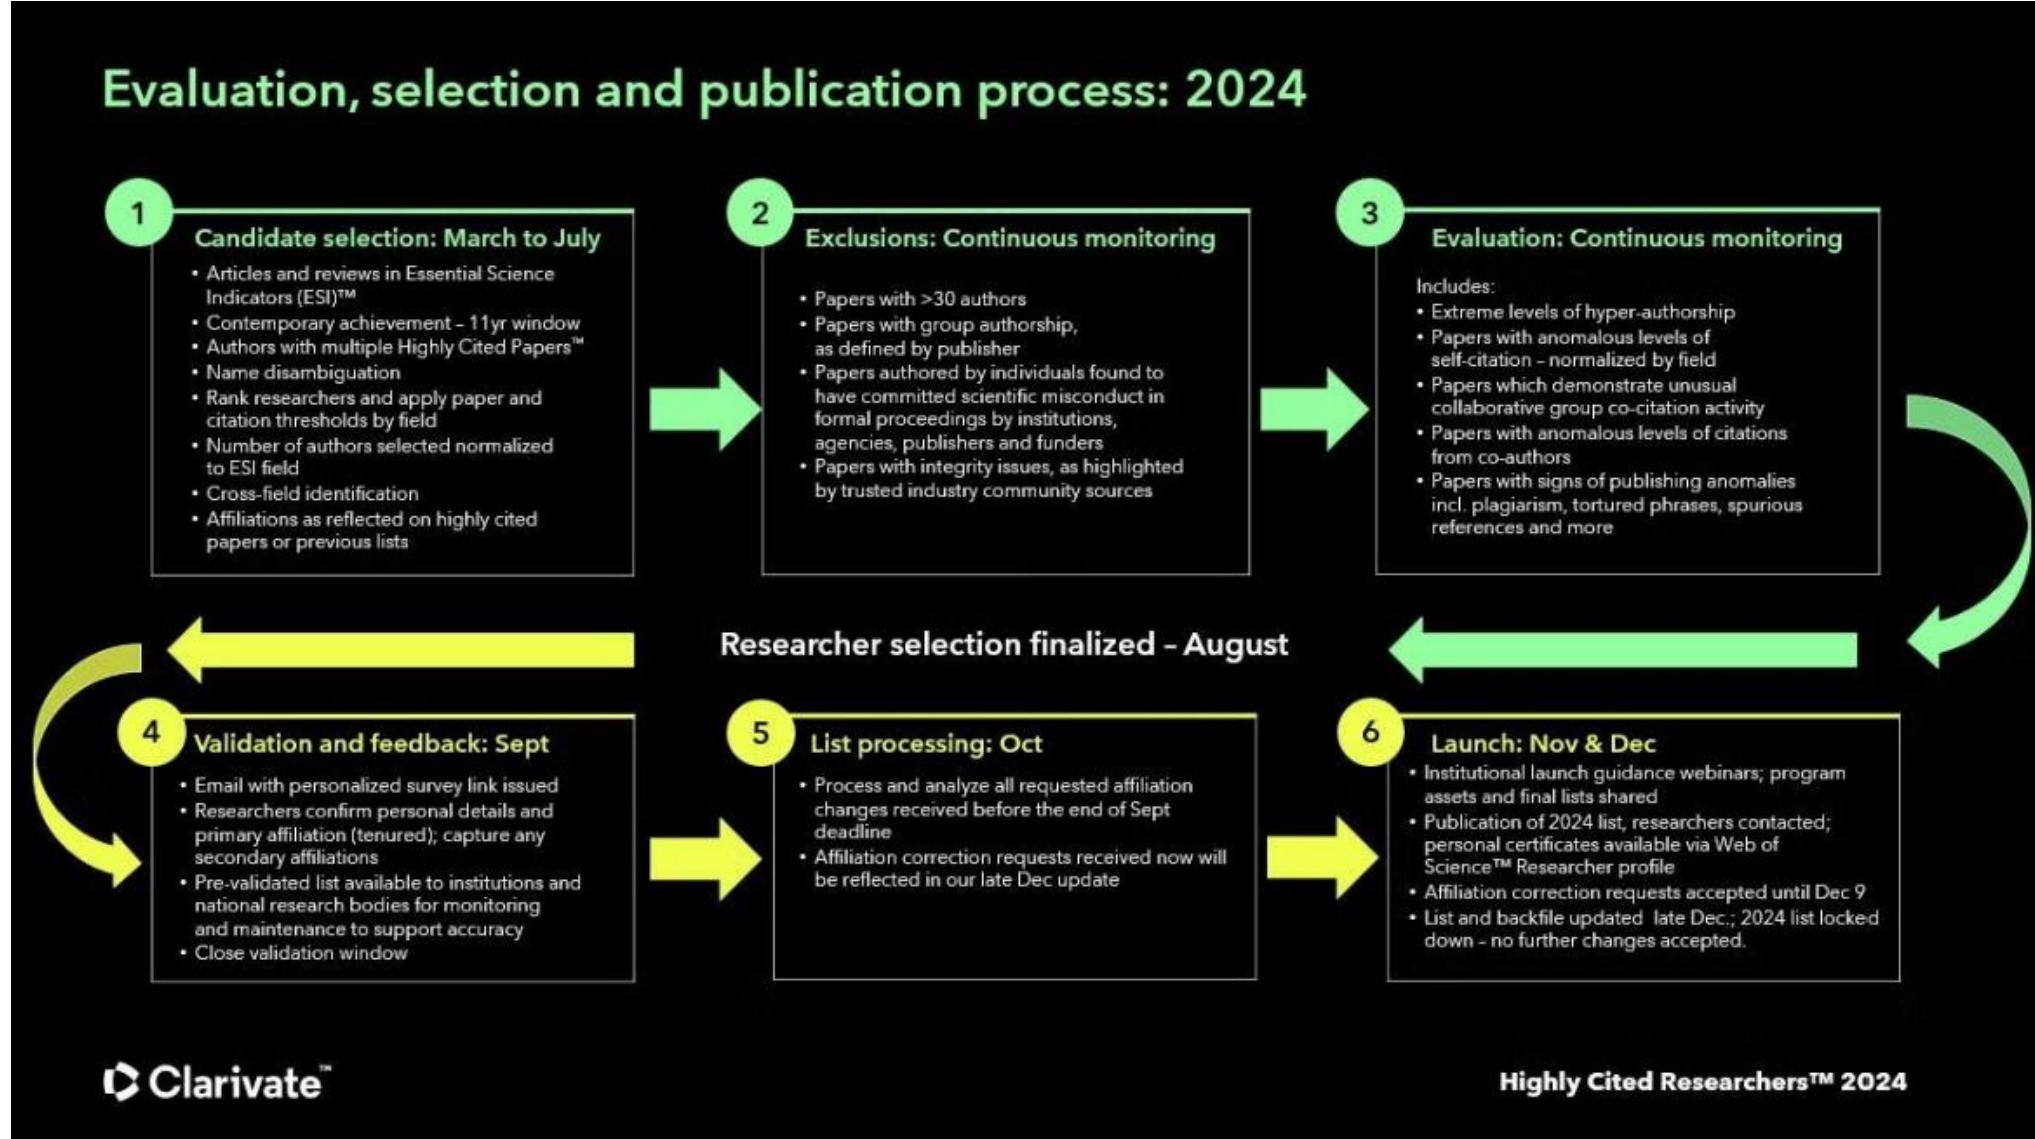

Summary:

- Source of data : Highly Cited Papers and 21 research fields from Essential Science Indicators ([By the end of March](#))
- Select authors with multiple Highly Cited Papers : name disambiguation, etc. ([March to July](#))
- Rank researchers and apply paper and citation thresholds by ESI field ([March to July](#))
- Excluding papers:
 - With more than 30 authors or with group authorship
 - With integrity issues or authored by individuals found to have committed scientific misconduct
 - With unusual patterns of self-citation, citations by co-authors or collaborative group citation activity
 - Etc.
- Validation process with each candidate and institution: confirmation of name, primary affiliation, etc. ([September](#))

For more information about the process and/or the areas of Mathematics and Cross-Field, please read:

<https://clarivate.com/highly-cited-researchers/evaluation-and-selection/>

How are Highly Cited Researchers selected and evaluated?

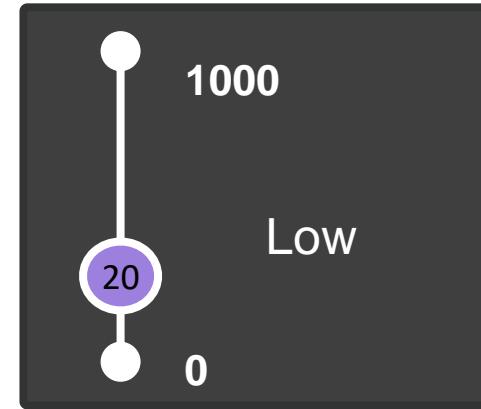

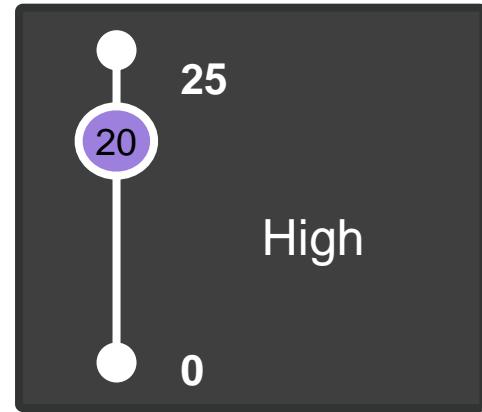

Highly Cited Papers & Highly Cited Researchers

- ¿Qué son un Highly Cited Paper y un Hot Paper?
- ¿Cómo se seleccionan y evalúan a los Highly Cited Researchers?
- Indicadores normalizados del impacto de las citas en Web of Science

Context is everything

Is the number of citations of this paper high or low?

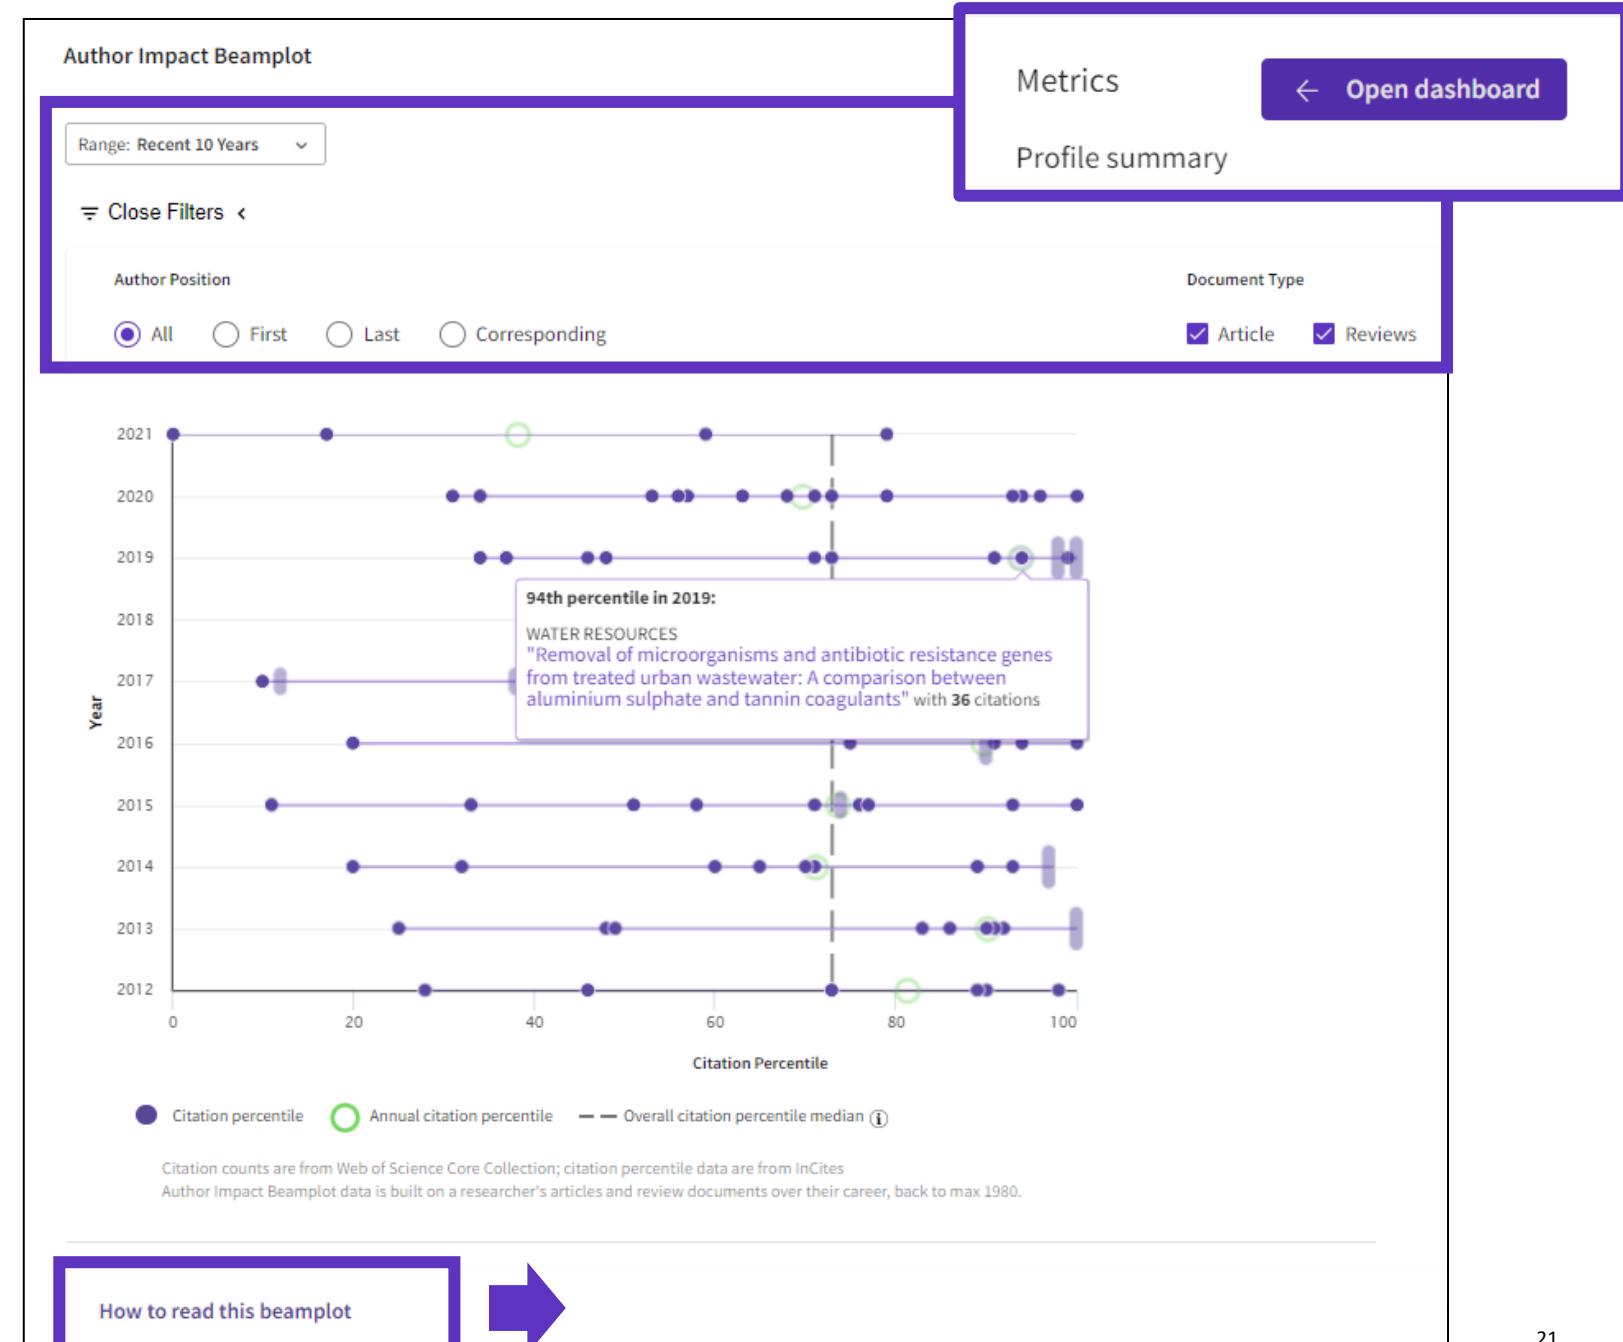

20
High or low?

It depends on the context (research area, publication year, document type)

Author Impact Beamplot

Un Beamplot permite visualizar en una sola cifra el percentil normalizado de cada documento que un investigador ha producido a lo largo de su carrera.

Normalized indicators in Web of Science

Notes:

- Only for publications from 1980
- Citations in InCites might be lower because InCites is updated once a month
- Not available for newly published articles because InCites is updated once a month

- The normalized indicators come from the InCites platform.
- Every user will have access (even if they don't have an institutional subscription)
- You must open the metrics panel to see them.
- They are recalculated at the end of each month.

Category Normalized Citation Impact

Category Normalized times cited count to the same category, and the document's citation ratio.

An InCites Benchmarking & Analytics subscription is required to see the values.

In the journal

Journal Normalized Citation Impact

Journal Normalized Citation Impact (JNCI) is the ratio of a document's actual times cited count to the expected count for a document of the same type, from the same journal, and published in the same year. If the ratio is above 1, then the document's citation performance is above average.

An InCites Benchmarking & Analytics subscription is required to see the values.

For more information on citation performance metrics, view the [InCites help file](#).

Comparison metrics from InCites

4 Citations

How does this document's citation performance compare to peers?

Data from [InCites Benchmarking & Analytics](#)

In the category

Percentile in subject area

76.94

The percentage of documents of the same type, from the same category and published in the same year that have a lower citation count than this paper.

Percentile in subject area

Category Normalized Citation Impact

1.47

Category Normalized Citation Impact (CNCI) is the ratio of a document's actual times cited count to the expected count for a document of the same type, from the same category, and published in the same year. If the ratio is above 1, then the document's citation performance is above average.

- While users who benefit from an institutional subscription to InCites will see the percentile value (the same as the one that appears in the author impact beamplot) and also the values of the CNCI and JNCI indicators (The average is 1).
- If your institution subscribes to InCites, you must use your personal account in Web of Science (which is the same as for InCites) and synchronize the 2 accounts

1.59

The expected number of citations calculated from other items of the same type (article, review, etc.) published in the same journal and year.

For more information on citation performance metrics, view the [InCites help file](#).
