Journal Citation Indicator

Introducido en 2021, el Journal Citation Indicator aprovecha otra medida de Clarivate: Category Normalized Citation Impact (CNCI), una métrica que se encuentra en InCites. El valor del Journal Citation Indicator es la media del CNCI para todos los artículos y revisiones publicados en una revista en los tres años anteriores.

Journal Citation Indicator (JCI) ⓘ

[Export](#)

2.19

The Journal Citation Indicator (JCI) is the average Category Normalized Citation Impact (CNCI) of citable items (articles & reviews) published by a journal over a recent three year period. The average JCI in a category is 1. Journals with a JCI of 1.5 have 50% more citation impact than the average in that category. It may be used alongside other metrics to help you evaluate journals. [Learn more](#)

[View all years](#)

Sacar conclusiones mejor informadas sobre el impacto de la revista.

For each article and review:

Category Normalized Citation Impact (CNCI) =

Actual citations

Expected citations

Expected citations = Average cites to items of the same document type, year, and category

Interpreting the Journal Citation Indicator

- A normalized ratio for easier comparisons
- While JCI=1 is the average* for the category, most journals will have a JCI < 1

*in practice, owing to the calculation the average will be slightly less than 1.

El Journal Citation Indicator (JCI) está diseñado para complementar el Journal Impact Factor (JIF) y otras métricas utilizadas actualmente en la comunidad de investigación.

Como muestra este ejemplo, los dos no son lo mismo.

Explore varios ángulos del desarrollo de una revista con la amplia gama de métricas en Journal Citation Reports.
